## SP SPRAY DEAERATORS

### DESIGN ADVANTAGES

- Removal of corrosive oxygen and carbon dioxide from boiler feedwater.
- Reduction in the use of oxygen scavengers and other additives.
- Opportunity to reclaim heat by recovering exhaust and flash steam.
- Improved heat transfer by eliminating non-condensable gases.
- Reduction of thermal shock to the boiler by feeding water closer to the boiler operating temperature.
- Guaranteed oxygen removal in excess of 0.005 cc/liter.
- Guaranteed to eliminate titratable free carbon dioxide to 0.
- Guaranteed to heat water to corresponding temperature of the saturated steam contained within the vessel.
- Guaranteed to deaerate at all loads from 3% To 100% of rated capacity.
- Capacities from 5000 PPH to 300,000 PPH.
- All stainless steel internal vent condenser.
- All stainless steel spray valve(s).
- 10 minute storage capacity minimum.
- All deaerators designed for exact job conditions - no over or under sizing.
- Completely packaged and ready for installation.
- All vessels designed, built, and stamped in accordance with the ASME code for 50 psig with a 1/16 in. corrosion allowance

### STANDARD EQUIPMENT & CONNECTIONS

- ASME Deaerator Vessel (50 psig design)
- Structural Steel Stand
- Motor-Driven Feedpump(s) each with
  - Bypass Relief Orifice
  - Suction Vortex Breaker
  - Suction Piping with Stop Valve, Strainer and Flex Connector
- Steam Inlet Flange
- Manual Vent Valve with Orifice
- Vent Condenser
- High Temp Return (>227°F)
- Medium Temp Return (180 - 227°F)
- Low Temp Return (<180°F)
- Overflow Drainer
- Self-Operating Steam Pressure Reducing Valve
- Mechanical Level Control with External Float Cage and Mechanical Modulating Water Inlet Valve

- Storage Section Thermometer
- Steam Section Pressure Gauge
- Full Height Water Sight Gauge(s)
- High Level Alarm Switch
- Low Level Alarm Switch
- Sampling Valve
- Sentinel Relief Valve
- Vacuum Breaker
- Vessel Drain Valve
- UL Listed NEMA 1 Control Panel
- Chemical Injection Quill Provision
- 12" x 16" Manway

### OPTIONAL EQUIPMENT & CONNECTIONS

- Pump Discharge Piping
- Pump Bypass Relief Valve(s)
- Full Capacity (of PRV) Relief Valve(s)
- Probe -Type Level / Make-Up Control
- Electric or Pneumatic Proportional Level Control
- Electric or Pneumatic Pressure Control
- Liquid Filled Gauges
- Chemical Injection Quill
- Custom Control Panel (NEMA 4)
- Steam Section Thermometer
- Panel-Mounted Gauges Standard with Stand over 72")
- Anode(s)
- Automatic Vent Valve
- 3-Valve Bypass for PRV
- 3-Valve Bypass for Water Inlet Control Valve
- Custom Location / Sizing of Flanges
- NDE / Stress Relief of Vessel
- Oxygen Test Kit(s)

\* Dimensions are "A x B". \*\* Approximate gallons to overflow. \*\*\* Minutes based on rated capacity.

NOTE: Size and arrangement of any system can be modified to fit customer's requirements.

### OPERATIONS OF THE TYPE "SP" SPRAY DEAERATOR

Water ( $<180^{\circ}\text{F}$ ) enters the internal direct contact vent condenser (D) thru the water inlet (A). Water flows thru the spray valves (B) in the form of a thin hollow cone pattern into the steam atmosphere. The water, now preheated and partially deaerated, enters the pan (E) and flows into the downcomer (G). Medium temperature return ( $180 - 225^{\circ}\text{F}$ ) bypasses the vent condenser and spray valves (as it is already preheated) & enters thru (F) directly into the pan and into the downcomer (G). Steam enters the steam inlet (C) & flows into the scrubber pot (H). It is in this section that the final deaeration takes place. The water enters the scrubber pot via the downcomer & mixes with the steam flowing into the scrubber pot from the steam inlet. Water and steam meet in the bottom section of the scrubber pot (H). The water is forced thru a series of baffles while being vigorously scrubbed by the steam. When the water reaches the top of the scrubber pot, it is finished with the deaeration process and flows over the top and into the storage section of the deaerator. All non-condensable gasses are released thru the vent orifice (J).

## SP SPRAY DEAERATORS

### SPECIFICATIONS

Furnish and install one Spray Deaerator as designed and manufactured by Precision Boilers. Deaerator shall be a model number \_\_\_\_\_ and shall consist of the following:

(1) \_\_\_\_\_ PPH horizontal spray/scrubber type deaerator with a capacity of \_\_\_\_\_ gallons to overflow ( \_\_\_\_\_ minutes of storage). Vessel shall be \_\_\_\_\_ diameter by \_\_\_\_\_ shell length (not including heads). Unit shall be constructed in accordance with the ASME code (latest revision) and shall be provided with a UL Listed control panel. Deaerator shall include connections as follows: water inlet \_\_\_\_\_, steam inlet \_\_\_\_\_, pump suction \_\_\_\_\_, overflow \_\_\_\_\_, relief valve and vacuum breaker (common) \_\_\_\_\_, vent \_\_\_\_\_, high temperature returns \_\_\_\_\_, medium temperature returns \_\_\_\_\_, vessel drain \_\_\_\_\_, thermometer \_\_\_\_\_, pressure gauge \_\_\_\_\_, 12"x16" manway (minimum), and all equalizing connections required for operation

(minimum of four). Each pump suction shall be equipped with a vortex breaker which must be constructed as follows: cross plate design of 1/4" material and dimensionally two times greater than the nozzle diameter (minimum). Deaerator shall operate at all flows from 3% to 100% of rated outlet capacity and shall deaerate the water so that the oxygen effluent leaving the deaerator storage tank shall not exceed .005 cc/liter as determined by the heat exchange institute method, Winkler method, or any other testing method approved by ASTM. Deaerator shall reduce the titratable free CO<sub>2</sub> to zero as determined by the APHA testing method. The spray/scrubber deaerator shall have all stainless steel spray valves. Deaerator shall have an internal direct contact vent condenser. The final stage of deaeration will utilize a steam scrubber designed to assure the temperature of the water leaving the scrubber is equal to the temperature of the saturated steam at the pressure maintained in the unit (e.g.: 5 psig / 227°F).

#### (2) Operating Conditions:

Returns: Low (<180°F)	_____ % @ _____ °F
Med (180-225°F)	_____ % @ _____ °F
High (>227°F)	_____ % @ _____ °F
Make-Up: _____ PSIG	_____ % @ _____ °F

### CONTACT US FOR THESE QUALITY PRODUCTS

- Electric Storage Heaters 125 to 5500 Gallons
- Electrode High Voltage Boilers
- Thermal Storage Systems Space Heating & Domestic or Process Water; Electric, Gas or Steam Fired
- Boiler Feedwater Systems
- Pressure Vessels, Water Storage Tanks, Flash Tanks, Blowdown Tanks
- Unfired Hot Water and Steam Generators
- Deaerators and Surge Tanks
- Steam Superheaters-Electric
- Circulation Heaters-Electric
- Gas or Oil-Fired Vertical Firetube Boilers and Water Heaters
- Gas or Oil-Fired WaterTube Boilers (Flextube Type)
- Chemical Bypass Feeders and Automatic Chemical Feed Systems
